

Textbook Survey

On a separate sheet of paper, answer the following questions.

1. What is the title and when was it published?
2. Who is/are the author(s)? If any, where do you find biographical information on the authors?
3. What chapter has topics on solving trigonometric functions and finding the area of regular polygons? What resource did you use to find this information?
4. Each chapter usually has broad topics, vocabulary words, and lots of problems in between. Where do you find information on what you learned is tied to the course and what you should take with you to the next chapter? Look at chapter 7 and see if you can find the page that will help you keep concepts and terms together.
5. What page does the glossary begin? Index pages begin? Answers to selected problems? Tables?
6. Skim chapter 6. Are there topics in chapter 6 that you know and don't know? Make a list for both.
7. What is chapter 13 on? What do you think that means? Are there topics in that chapter that you have studied before and what are they?
8. Looking through the table of contents, which topics look interesting to you and why?
